About me

I have successfully finished a JavaScript and React course.
I use my passion and skills to design and implement features for web platforms.

Projects

HUSTLE GYM

I've created a full responsive website for a gym where I've worked with TypeScript, React and Tailwind CSS. I've implemented text animations using Framer Motion. I've learned how to use a new building tool which provides a faster and leaner development experience called Vite. I've succesfully deployed my gym website using Cloudflare, which in my opinion is easier and faster to work with. The "Contact Us" page is functional where I've used FormSubmit. I've also designed and created my own graphics elements for my page to look aesthetically pleasing using Krita, Unsplash and Canva.

- SKILLS: TypeScript, React, Tailwind CSS, Vite, Framer Motion, Krita, Unsplash, Canva, Photoshop, Cloudflare.

CAT BREEDS

Another project of mine it's a website for cat breeds where you can search information about any cat breed in the world using web APIs. Also I implemented and manipulated HTML and CSS classes in order to build a good looking platform.

- SKILLS: Javascript, React, CSS, HTML.

PORTFOLIO

Besides this, I've built a full responsive web platform for my portfolio where I've worked with JavaScript, React and Tailwind CSS.
On "Projects" page I've implemented functionalities for the viewer to have a look at a demo of my projects, which are hosted online using Cloudflare, and also a code button where you can see my project's code on Github.
The "Contact" page is functional where i've worked with Getform. Also I used React Scroll component for animating vertical scrolling.

- SKILLS: Javascript, React, Tailwind CSS, Cloudflare, Getform.

MEALS-APP

For this project I've created a web platform for food recipes where I've used JavaScript to implement functionalities that were needed. I've sent requests to
web API and I've integrated their responses to my application.

- SKILLS: Javascript, React, CSS, HTML.

Califications

- The Complete JavaScript Course 2023: From Zero to Expert. (Udemy)

- React - The Complete Guide including: Hooks, React Router, Redux. (Udemy)
